UzLeeder Agency · INVESTOR PRESENTATION

THE GLOBAL TRANSIT GATEWAY

T-Port 2.0

One Destination. Every Way to Get There.

Founder · **Max Lee Miller** | TravelTech · MobilityTech · AI | **Starting in Uzbekistan**

01 · EXECUTIVE SUMMARY

T-Port at a glance

Industry	TravelTech, MobilityTech, AI, Transport Technology
Market	Uzbekistan first
Expansion	Central Asia, then selected international corridors
Model	Freemium B2C + Premium subscriptions + B2B SaaS
Ambition	A scalable regional transport-technology platform with global potential

OUR MISSION

Make complex journeys easier to discover, compare and plan — through one intelligent platform.

Free for travelers first. Premium and B2B software once demand is proven.

02 · THE PROBLEM

Two sides of one fragmented market

TRAVELERS

They assemble the journey alone

Tashkent → Almaty means weighing, across services and countries:

- ✓ Departure and arrival times
- ✓ Total journey duration
- ✓ Local transport to stations
- ✓ Is the route practical?
- ✓ Prices and availability
- ✓ Transfers and waiting
- ✓ Border-crossing rules

OPERATORS

They run on manual tools

Manual reservations · inconsistent seat records · limited reporting · scattered customer data · hard-to-track vehicle and driver assignments · low digital visibility

To be validated through direct operator interviews

03 · THE T-PORT SOLUTION

One starting point for the whole journey

TRAVELER

"I need to travel from Tashkent to Bukhara tomorrow. Find an affordable option with minimal waiting time."

CORE VALUE

Fragmented transport information, turned into a clear, practical journey plan.

T-PORT

- ✓ Compares train, flight, bus and other supported options
- ✓ Shows verified prices and schedules where available
- ✓ Estimates total journey duration
- ✓ Identifies required transfers
- ✓ Ranks alternatives by the traveler's priorities
- Links to providers for final checks and booking

04 · PRODUCT ECOSYSTEM

Four products, one platform

B2C

T-Port Travel

Unified search, journey comparison, multimodal routes, smart recommendations, saved journeys, external booking links.

AI

T-Port Intelligence

Plan in natural language. It interprets the request, applies preferences and explains the alternatives.

ALERTS

Ticket Sniper

Watches permitted sources, sends Telegram or web alerts, links to the provider. Alerts — not automated buying.

B2B

T-Port Fleet

Web-CRM for vehicles, drivers, routes, seat inventory, reservations, dispatch and reporting.

Plus T-Port Workspace — internal tools for data sources, monitoring, subscriptions, analytics, security and support.

05 · T-PORT INTELLIGENCE

AI interprets. Software verifies.

ASK IN PLAIN WORDS

"Find the cheapest practical way to Samarkand."

"I want to arrive before noon."

"Avoid transfers shorter than 30 minutes."

"Compare the fastest and most affordable."

Language model
Understands requests, extracts preferences, explains options

Provider-data adapters
Schedules, prices and availability from permitted sources

Deterministic logic
Durations, transfers and validation

AI never invents availability, prices or schedules.

06 · MARKET ENTRY

Start in Uzbekistan. Validate first.

WHAT WE WILL VALIDATE

01 Which routes get the most searches

02 Which transport categories can be covered reliably

03 Whether users return to plan more journeys

04 Whether AI planning improves the experience

05 Which Premium features users will pay for

06 Whether operators value the B2B software

TARGET CUSTOMER GROUPS

Students
Study and family trips

Domestic travelers
Trips within Uzbekistan

Business travelers
Predictable journey times

Tourists
Unfamiliar transport systems

Frequent travelers
Saved routes and alerts

Transport operators
Route, vehicle and booking tools

07 · COMPETITIVE STRATEGY

Built around the journey, not the ticket

Ticketing sites, airline search, mobility and travel apps already exist. T-Port tests whether organizing them around the complete trip adds value.

Journey-level thinking

Origin to destination, not one ticket.

Multimodal planning

Combinations of transport where data allows.

Natural language

Describe preferences instead of filters.

Clear comparisons

Trade-offs between price, time and transfers.

A potential B2B layer

Fleet software for operators who want it.

⚠ Intended differentiators, not yet proven advantages — to be shown through a working product and user research.

Five phases, each earned by the last

PHASE 1

Build and validate

Free MVP, limited routes, reliable sources. Prove successful searches and repeat use.

PHASE 2

Organic distribution

SEO route pages, city guides, Telegram bot, social demos, student communities, referrals.

PHASE 3

Test Premium

A paid plan built from usage data — without gutting the free core.

PHASE 4

Pilot Fleet

Interview operators, pilot with willing customers, prove time saved.

PHASE 5

Expand when justified

More routes and markets once data, reliability, demand and capital allow.

09 · BUSINESS MODEL

Two planned revenue engines

Testing prices, not validated

B2C Premium

SEARCH STAYS FREE

Free	Monthly	Annual
$0	$3	$29

Advanced AI route planning · price and availability alerts · Ticket Sniper · transfer analysis · saved journeys

B2B · T-Port Fleet

PER MONTH

Starter	$29
Business	$79
Pro	$149
Enterprise	Custom

Counted only after real customers subscribe.

Not in the initial model: affiliate commissions · booking integrations · labeled sponsored placements · analytics tools

A lean MVP operating budget

Expense category	Monthly range
Hosting and backend	$20–$100
Database and caching	$0–$80
AI / API usage	$20–$150
Monitoring and notifications	$0–$30
Other technical services	$0–$30
Indicative total	$40–$390

INFRASTRUCTURE ONLY

$40–390

per month · planning estimates, not vendor quotes

Excludes

Founder compensation · significant marketing · development labor · legal and accounting · taxes · one-time launch costs

How revenue scales

Illustrations, not forecasts

Premium at $3 / month

Paying subscribers	Gross monthly revenue
100	$300
500	$1,500
1,000	$3,000
5,000	$15,000
10,000	$30,000
50,000	$150,000

T-Port Fleet (B2B)

Operators	Avg fee	Gross / month
25	$50	$1,250
100	$75	$7,500
300	$100	$30,000
1,000	$100	$100,000

Net revenue is reduced by annual discounts, refunds, payment fees, taxes and churn.

12 · BREAK-EVEN ANALYSIS

The number that matters first

≈422

paying subscribers

$1,200 ÷ $2.85 ≈ 422

Example: $1,200 monthly costs; a $3 plan minus 5% payment processing. Taxes, refunds, acquisition costs, founder pay and extra infrastructure raise the number.

WHAT WE WILL TRACK

- MRR
- Recognized revenue
- Cash collected
- Operating expenses
- Gross margin
- CAC
- Retention and churn
- Lifetime value
- Cash runway
- Profit or loss

Local proof first, then the region

YEAR 1

Establish Uzbekistan

Prove people need and reuse T-Port.

MVP · permitted data · test Premium · operator interviews · Fleet pilot if demanded

YEAR 2

Product and revenue

Repeatable B2C revenue and a validated B2B offer.

Coverage · refine Premium · alerts · paying Fleet pilots

YEAR 3

Central Asia

Evaluate Kazakhstan and Kyrgyzstan.

Demand · data · payments · regulation · language — market by market

YEAR 4

Regional platform

Strengthen tech and operations.

New corridors · mature Fleet · localization · selected integrations

YEAR 5

Evaluate global

Corridors to Türkiye, UAE, Saudi Arabia, China.

Each needs its own validation and compliance

☆ A **$1B valuation** is a long-term ambition, not an assumed outcome — it must be earned through scale and durable revenue.

A modular architecture

EXPERIENCE	**Next.js · TypeScript** — responsive web app and PWA
AI LAYER	**Language models** — understand requests, extract preferences, explain options
CORE	**Python · FastAPI** — search orchestration, users, subscriptions, business logic
DATA	**PostgreSQL · Redis + workers · provider adapters** — PostGIS when spatial search justifies it
DELIVERY	**Telegram · web notifications** — for supported alerts

Principle: natural-language interpretation stays separate from route calculation and factual data.

Permitted data only

Official APIs, permitted public information and authorized sources.

No contract does not mean every site can be scraped or every booking automated. The business will never depend on bypassing access controls.

B2B legal classification, personal data, hosting and cross-border data flows reviewed under Uzbek law before launch.

BEFORE ANY SOURCE IS ADDED

- ✓ Terms of service and data-use rights
- ✓ Technical access restrictions
- ✓ Attribution requirements
- ✓ Accuracy and update frequency
- ✓ Privacy implications
- ✓ Transport and consumer-protection rules

The moat is execution

A search interface alone is not a durable advantage.

Journey intelligence

A consistent way to compare whole journeys.

Data normalization

Reliable processes across many permitted sources.

User experience

A simple interface for a complex problem.

Retention

Saved preferences, useful alerts, repeat planning.

Operator software

Fleet tools businesses choose to keep using.

Regional expertise

Routes, transfer limits and local needs.

17 · KEY RISKS

Risks we plan around

Risk	Mitigation
Insufficient data access	Start with a few permitted sources and routes; expand only when coverage holds
Low willingness to pay	Test features and pricing before Premium carries the cost structure
Competition	Focus on complete journeys, data quality, usability and proven features
Expensive acquisition	Track CAC, organic growth, retention and LTV before paid marketing
B2B adoption	Interview operators, run small pilots, build only for validated problems
Wrong journey info	Validate data, show timestamps and uncertainty, deterministic calculations
Legal complexity	Review each market and business activity separately before launch

Grow through usefulness and trust

GROWTH MODEL

01 Useful free search
02 Help users compare journeys
03 Repeat use via saved routes and alerts
04 Convert engaged users to Premium
05 Offer Fleet to operators with demand
06 Improve coverage and retention
07 Expand once the model is validated

USE OF FUNDS

- Product development
- Reliable data access
- Infrastructure
- User acquisition
- Security and compliance
- Customer support
- B2B pilot

Accelerators, angels, VC or strategic partners when the time is right. Any raise is tied to a defined budget and milestones.

Start local.
Solve a real problem.
Prove the model.
Expand with evidence.

T-Port 2.0 — One Destination. Every Way to Get There.
