PRESIDENT AI AWARD · Startup Pitch 2027

BY UzLeeder

CAIBER Learn 2.0

Learn Smarter. Grow Further. Build Your Future.

AI-Powered Diagnostic & Adaptive Learning Ecosystem

Education · AI · EdTech SaaS

Starting in Uzbekistan

Founder **Max** · Project & Ecosystem Manager **Jake**

01 — THE VISION

Quality education and precise guidance, accessible to everyone

THE REALITY

Millions want to master English and modern skills — but where a student lives, what their family earns, or whether they can reach a top learning center still decides the outcome.

OUR MISSION

One diagnostic and learning platform that shows every learner where they stand, what their gaps are, and the exact path to their target score.

THE MODEL

Two engines working together:

Freemium B2C for learners

B2B SaaS · CAIBER Classroom

02 — THE PROBLEM

Two sides of a fragmented education market

For learners

Blind studying

Geographical and financial barriers

Students in the regions struggle to reach qualified mentors.

One-size-fits-all courses

25 students in a room get the same lesson despite different weak points.

No clear direction

Learners memorize random words without knowing which skills hold their score back.

For educators and centers

Manual overload

Manual grading

Teachers spend hours checking paper tests and homework instead of teaching.

Zero gap analytics

Centers track attendance and payments — not topic-level mastery per student.

Fragmented tools

Tests on paper, homework on Telegram, lessons on YouTube — no unified data.

03 — OUR SOLUTION

Introducing CAIBER Learn: diagnostic-first adaptive education

01

AI diagnostic assessment

Placement and topic tests pinpoint CEFR level (A1–C1) and hidden gaps.

02

Dynamic learning paths

Daily unit plans from test results — no time wasted on mastered topics.

03

English first

Vocabulary, grammar, reading, listening and writing practice.

04

Teacher–student bridge

Remote learners meet verified teachers; teachers get automated grading.

05

Granular progress tracking

Real-time mastery: done, improving, and due for spaced repetition.

Diagnose first, then teach. First focus: English — General English, Pre-IELTS and IELTS.

04 — PRODUCT ECOSYSTEM

Four core modules, one unified platform

B2C · WEB / PWA

CAIBER Study

Daily vocabulary units, grammar drills, reading passages and a personal progress dashboard.

AI LAYER

Diagnostic & AI Tutor

Plain-language error explanations, essay feedback against official rubrics, Socratic hints.

B2B SAAS · FOR CENTERS

CAIBER Classroom

Web-CRM and LMS: automated test assignment, instant grading and group gap analytics.

TELEGRAM & WEB ALERTS

Retention Engine

Daily study streaks, spaced-repetition reminders and teacher feedback alerts.

05 — OUR AI INNOVATION

Deterministic logic scores. AI explains and guides.

1 Diagnostic test → 2 Algorithmic gap analysis → 3 Personalized study plan → 4 Targeted practice → 5 Follow-up verification

Deterministic scoring engine

Scores, CEFR mapping and spaced-repetition intervals come from strict software rules. AI never guesses a grade.

Curriculum-bound AI layer

Explains why an answer is wrong in Uzbek, Russian or English and points to specific curriculum units.

Anti-cheat Socratic mode

Never writes the essay or homework. It highlights the weak sentence and guides the learner to fix it.

06 — COMPETITIVE STRATEGY

Why not just YouTube, ChatGPT or a local course?

Alternative	Its limit	CAIBER
YouTube / free content	Unstructured videos, no feedback	Step-by-step diagnostic path with active testing
General AI (ChatGPT)	Direct answers, no curriculum memory, can get rules wrong	Tied to curriculum rubrics, tracks long-term gaps, Socratic guidance
Local learning centers	Fixed schedule, high cost, location-bound	Available anywhere 24/7, plus B2B tools that cut centers' manual work

☆ An AI chat box is not a moat. Ours is the combination: **structured curriculum + deterministic gap tracking + B2B teacher workflows.**

07 — TARGET MARKET

Focused entry in Uzbekistan, built for regional scale

B2C PRIMARY

Learners, ages 14–24

School and university students preparing for English proficiency (CEFR / IELTS) and university admissions.

B2B PRIMARY

The ”Trojan horse”

Private English tutors, independent IELTS instructors and regional academies that need digital assessment and homework automation.

PHASE 2

Expansion

Programming and IT tracks (Python, algorithms, web development) and Central Asian localization.

08 — BUSINESS MODEL

Two engines: B2C freemium + B2B SaaS

Engine 1 · Learners

Diagnostic stays free

Free

$0

Placement test, basic gap report, limited daily practice

CAIBER Pro

$4/mo

or $39 / year

Full AI loop, adaptive daily plan, writing and reading feedback

Engine 2 · CAIBER Classroom

B2B

Tutor Starter

$19/mo

Up to 30 students, automated homework and test grading

Academy Pro

$49–99

per month

Up to 300 students, multi-teacher dashboard, gap analytics, parent reports

⚠ Prices are pilot hypotheses, to be validated in Q1–Q2 2027 user testing.

09 — FINANCIAL DISCIPLINE

Lean MVP, fast break-even threshold

MONTHLY MVP INFRASTRUCTURE

Item	Range
Cloud hosting and FastAPI backend	$20–$80
PostgreSQL and Redis caching	$0–$60
LLM API usage (caching, small models)	$30–$150
Storage and notifications	$0–$30
Indicative total	$50–$320

BREAK-EVEN

At a ~$1,000 / month infrastructure and operations baseline:

≈265
Pro learners
at $3.80 net

or

≈15
Learning centers
at $65 average

10 — REVENUE SCENARIOS

How hybrid B2C + B2B revenue scales

Illustrations, not forecasts

PILOT STAGE

$1,350

gross per month

250 Pro learners	**$1,000**
10 tutors / centers	**$350**

EARLY TRACTION

$10,500

gross per month

2,000 Pro learners	**$8,000**
50 centers	**$2,500**

NATIONAL SCALE

$75,000

gross per month

15,000 Pro learners	**$60,000**
250 centers	**$15,000**

These show unit-economic mechanics, not guaranteed results. Net revenue is lower after payment processing, taxes and churn.

11 — TECHNOLOGY ARCHITECTURE

Fast, low-latency and cost-controlled

EXPERIENCE	**Next.js · TypeScript · Tailwind**	Responsive web and mobile-ready PWA, smooth on low-bandwidth regional connections
CORE BACKEND	**Python · FastAPI**	Assessment engine, user state, B2B classroom management, deterministic scoring
AI & NLP	**LangChain · Structured Outputs**	Rubric-based writing feedback, error explanations, curriculum-mapped recommendations
DATA & CACHE	**PostgreSQL · Redis**	Curriculum, mastery graphs and B2B multi-tenancy; cached explanations cut AI costs (target: up to 70%)

The AI layer is strictly isolated from grading math.

12 — GO-TO-MARKET

Five phases, each earned by real learner outcomes

PHASE 1

Build core MVP

English diagnostic engine plus vocabulary and grammar tracker.

PHASE 2

Validate with users

Pilots with 100+ students and 5+ teachers; measure diagnostic accuracy.

PHASE 3

B2B Trojan horse

Free automated placement tests bring academies in; convert them to Classroom.

PHASE 4

Monetize and retain

Turn on Pro and Telegram repetition bots once repeat use is proven.

PHASE 5

Expand curriculum

Programming and IT tracks; scale across Central Asia.

13 — EXECUTION ROADMAP

From technical prototype to national pilot

OCT – DEC 2026

Foundation sprint

Student and teacher interviews, PostgreSQL schema, FastAPI diagnostic and gap-analysis prototype, first English units.

JAN – MAR 2027

Core MVP launch

Deploy the web platform, test AI writing and grammar explanations, onboard the first closed beta cohort.

APR – JUN 2027

Academy pilots and metrics

Controlled pilots with partner centers; measure score gains from first to follow-up assessment.

JUL 2027 ONWARD

President AI Award and scale

Present verified pilot data, launch paid tiers, expand curriculum tracks.

Focused execution led by builders

M

Max

Mekhriddin Abdualim

Founder & Lead Architect

Product vision, system architecture, full-stack engineering (Python, FastAPI, Next.js) and AI workflow design. Has built custom educational CRM and portal systems.

J

Jake

Project & Ecosystem Manager

Operational execution, milestone tracking, user-interview pipelines, and partnerships with educators and learning centers.

</>

AI-assisted engineering workflow

Directed and validated by human leadership — a lean team ships production-grade software fast, and hires domain educators as validated needs grow.

15 — OUR ASK

Partner with us to build the future of measurable learning

Through the President AI Award 2027 and ecosystem partners, we seek:

01

Pilot access

Schools, universities and private centers to test CAIBER Classroom at scale.

02

Mentorship

Expert review of our CEFR diagnostic rubrics and AI evaluation safety.

03

Grant / seed support

Tied to milestones: infrastructure, curriculum digitization, verified learner progress.

Learn Smarter. Grow Further. Build Your Future.
